Post Reply. Completed my Switch Pros install. Need to convert factory ground to a lug and add a larger gauge to the fender. Squirrel13 , Dec 10, Paul68 , BeastModeSteven and vanrynd like this. Props to you, I wish I had the skill to work with electronics Very cool. Nice work. Just finished the same setup but ran the Ignition and dimmer triggers into the cab fuse panel. Are your wires running through the connector in the fuse box or did you find a hole to route them through. Did you treat the termination block with anything to prevent corrosion? I ran Deutsch connectors since I have a bunch of them. I will be fabbing up some kind of splash guard for the terminal block. Good eye finding a good spot to drill. I may move my triggers down the line. I may have to order some of that NO OX. Post up a picture of a cover when you get one made! Thanks for the feedback. Skydvrr , Dec 10, Shellshock , Dec 10, Good pics. Doing mine this weekend. When with the CaliRaised offroad in cab mount. You can get the negative fender cable from SDHQ as well for the clean install. So clean. Still waiting for a switch pros to go on sale to install mine. Have everything else ready to go! Ram Tough Track for mounting on the dash of '19 Tacoma Where's the front accessory rail in the pickup box?? Cargo Light Switch installation Discussion in ' 3rd Gen. Post Reply. Joined: Feb 8, Member: Messages: 3. Hello, New to TacomaWorld, new to the Tacoma. I wanted to install an OEM bed light kit. I can find all sorts of info on installing the actual lights, but my question is about installing an OEM cargo light switch and relay in the cab. Mine only has a blank in the dash where the cargo light switch is in other models. I only have the third brake light. The OEM bed lights description says if you don't have the switch you must install a switch and relay. I'm a fairly handy guy, but don't want to splice in to the electrical system on a brand new vehicle. Is the switch and relay just a plug in installation? It looks like there is an unused wiring harness behind the dash below the cargo light switch blank off. Is this for the cargo switch? Will I need another relay to plug in? Thanks for the help. Hoping my first foray into upgrading my Tacoma will make for an enjoyable hobby. JasonJason , Feb 8, You have the relay already. Since the vehicle doesn't have or fit the Cargo Lamp you could get the mating connector to the cargo lamp switch connector. Place a jumper wire on the connector wire side, not the switch side on the blue wire 5 to white with black strip wire 7, check that you have power to the connector behind the rear lamps where the bed lamps connect to. Last edited: Feb 8, Skydvrr likes this. I looked behind both tailamps, no relay present as I found in one post. Is the Mattgecko setup the best choice for my older truck? Thanks Caribe, jumpering the blue to white black did nothing, of course I have a third stop lamp, no cargo lamp. Is the wiring present at the the existing lamp , or skip using that light and run a lead from the relay to whatever lights I put in? Last edited: Feb 9, Does it also serve some other purpose? Odd that the truck would have the switch harness and relay and it goes too nothing. I hoped there was a taped back plug some where near the third brake lamp that would be an easy to tap source for the Mattgecko lights. JasonJason , Feb 15, Pre , Tacos weren't prewired for bed lights. Install was a bit more involved. Instructions attached. There may be different part numbers depending on bed and cab because of wiring length so double check that. Homiec , Feb 16, at AM. Show Ignored Content. Since the truck was barely used and in mint condition I am not sure if this is maybe how the truck was factory issued, so I rather ask. It is unusual for any car or truck to be able to remove the key before the truck is placed in park. This seems odd. Usually Only position 0 will allow removal as the ignition is off. To me it seems that the Ignition switch and lock is shot. Any idea if this is the default behavior of a factory switch for the Tacoma? I sure dont like it. I need to have it impossible to remove key if I am not in park but maybe they were issued like that? Last edited: Dec 9, My and Tacoma would did NOT operate like that. Neither did my brothers If you feel like fixing it yourself, here is a video of how to replace it. TnShooter , Dec 8, If it's seen a lot of use it's not uncommon for worn key to come out of the cylinder when not in the off position. Hamer95USA and Wyoming09 like this. My alternator fan squeels the same for the few first seconds. The belts are new and tight enough. The shops usually put those narrow out of spec cheap gates belts on to save money. Once I put a wider toothed AX belts on all the squeeling was gone on my cars. I intentionally use them on my volvos and have no more problems. I work on my own cars, no problem to do it myself. Easy as pie on a Tacoma. I received the Tacoma with about 7 keys and wondered why so many. You might be right. I didnt try all of them and might be using a worn key. Excellent help thanks. Last edited: Dec 8, TnShooter likes this. Tried some of the other keys and two of them works as it should. Why would someone keep worn dangerous keys, and worse, give you their worn keys,? I didnt expect that, so I didnt check. I will use the best one as a master and have some made. DrZ , Dec 9, Parking brakes are great when issued with manual transmissions and always easily accessible and always used them. On most automatics though they are foot pedals and all weird stuff, and I end up not using them just because it is a hassle. The best is still the hand-brake design center of front seats, which sadly is absent on most modern cars. Wyoming09 , Dec 9, Hamer95USA likes this. My key was so worn that I could take it out at any time. You guys are lucky with those dealer prices. I will find out, but I dont expect those prices. Guess it scales with the property rental or hot gas the closer to DC you get. Thanks all for the help. Last edited: Dec 12, Went to the dealer in Warrenton VA and I got two new keys and they give me the keycode for my truck for future keys. Was helped by a great tech by the last name Faass. Shows you. They milk the daylights out of you just because they think they are so smarty. I've had the same issue with a worn out ignition key. I thought it was the gas lid lock, took it apart, soaked it in acetone, reassembled it, and lubricated all of the locks on the truck. I ended getting my factory spare key, went down to the local hardware store, and got a new duplicate ignition key made. Being the original owner, it's amazing that the original factory ignition key lasted 21 years. Hamer95USA , Jan 15, Show Ignored Content. BamaTaco56 , Sep 12, TL;DR mostly stock, grocery gettin' Prius. I believe those should be the small Toyota push button switches. Siblue , Sep 15, Dimension is roughly 1. Dimension for the larger stock switch is roughly 1. Per ch4x4 spec sheet. Last edited: Nov 12, OveriAnderson , Nov 1, I found a switch that will fit in that space at Auto Zone and O Reilly's. They come in different colors. To cut a hole in the existing cover, I used a straight edge, utility knife, chisels, and drilled holes into the cover and the cleaned it up with a chisel. You are working within tight tolerance so I urge caution. I can take pictures if some one wants to see how I did it. MarkMO , Nov 14, Toyota Small Push Switch.
